SNOASIS MEDICAL ANNOUNCES STRATEGIC PARTNERSHIP WITH SURGICAL BIOLOGICS

In conjunction with Surgical Biologics, a boutique tissue processing company; Snoasis Medical plans to launch its first product, BioCover™, expected to be effective in perioplastic surgery, by as early as 2009.

Denver, Colorado, July, 2008. Snoasis Medical Inc. and Surgical Biologics LLC, entered into a license, manufacturing and distribution partnership of dental soft tissue grafting procedures on June 18, 2007. Under the terms of the agreement, Snoasis Medical obtained the exclusive, world-wide dental rights to all current and future products developed and manufactured by Surgical Biologics.

The core technology behind these products is donated placental tissue, specifically the amniotic sac. This tissue undergoes Purion™; a proprietary tissue processing technology designed to cleanse the tissue and preserve its delicate structure. Snoasis Medical expects to begin commercial distribution of its first product, BioCover in 2009.

Early clinical data suggests that BioCover offers an alternative for patients who wish to avoid palatal tissue (autograft) harvest for the treatment of gingival recession. Due to the ability of BioCover to naturally adhere to the surgical site, the procedure is easier to perform and surgery time is reduced. According to Robert Tofe, president and founder of Snoasis Medical, “patients will soon be able to obtain treatment in a relatively pain free manner over their lunch break.”

Approximately one quarter of adults in the United States suffer from gingival recession. Of the estimated 850,000 procedures performed in 2007, over 80% used graft material harvested from the roof of the patient’s mouth. In a recent survey of 140 periodontists, 94% agreed that the need for an effective alternative to autograft in the treatment of gingival recession is one of their greatest unmet needs.

Founded in 2007, Snoasis Medical (Denver, CO) is focused on the development and commercialization of products for use in dental regenerative procedures. Founded in 2005, Surgical Biologics (Kennessaw, GA) is boutique tissue processing company that focuses exclusively on the processing of placental tissue.
